Assignment 0206 Feedback

Proficiencies for *1a* and *1b* still only go as high as **|** in this assignment due to our still being in the early going with respect to these outcomes. The next assignments with these proficiencies will be expansive enough to merit a **+** maximum.

Thomas E. Bramanti   *jadengore / edward@bramanti.org*

1a — Great job with figuring out and issuing process/memory/file commands. There are some small glitches here and there (see inline comments), but not enough to be a spoiler. (**|**)

1b — Looks safe to say that you can redirect I/O at will. (**|**)

1c — You connected to and worked with *my.cs.lmu.edu* and *screen*, respectively. Tunnel evidence also [almost] clearly shows your tunnel command and functionality. (**+**)

3a — You generally found appropriate evidence for everything that was requested. There is a slight miss with regard to the Linux kernel, but that is too minor to hit the proficiency. (**+**)

4d — Overall you handled information seeking and resource use quite well. (**+**)

4e — Commit frequency and messages are appropriate for the work done. (**+**)

4f — Work submitted on time, with a tiny fix a day later. (**+**)
